Yaounde', Cameroon

2020 - 2023

PROJECTS

E-learning Platform. A task-based e-learning platform helps train software developers. This platform has three actors: admins, code reviewers, and students. Students access learning resources and products on the student dashboard. They have daily lessons, exercises, and projects. After completing a project, students can request a review by providing a pull request link. The code reviewer evaluates the project and gives feedback. The code reviewer can approve the project or request changes. The student then submits the project to the admin.

- **Tools Used:** React JS, Node.js, MongoDB, Postman, JWT, Typescript, Redux, Cookies..
- **Live Demo:** [live](#)
- **Source Code:** [Source](#)
